name

note
Hidden

Visible columns: pinned order first, then column position. Dashed columns stay hidden.

Changes by column (current → after copying)					
Column	Position (zero-based)	Visibility	Pin index	Sort priority	Change
id	0	Shown	None → 0	None → 2 DESC	Changed
name	1 → 2	Shown	0 → None	None	Changed
status	2 → 1	Shown	None	None → 1 ASC	Changed
note	3	Shown → Hidden	None	None	Changed

What stays with the target

Entry ID, bindings, conditions, serialized values, other options and all unselected entries. Bytes outside the selected layout fields are preserved.

3. Save the reviewed copy

Close DBeaver before applying the copy. Its delayed save can overwrite changes made outside the application while it is running.

Existing values are preserved unchanged. This is not a whole-file safety check or database-schema validation.
